

Response Quick Step Guide

Databases

A **Response database** is a file with a file extension of .prs. This file is the storage area in Response where save your class information, lessons and questions, standards, and student performance data for sessions already administered.

The system is set up so you can start using it right away. You can use the default database, *defaultDB.prs*, and start asking questions now. You also have the option of creating your own database as seen below.

Create a New Database

You have the option of creating your own database if you share the Response system with other instructors. Organizing the data collected by Response is easy when you save multiple classes and lessons to a single database.

1. **Open Response** from the desktop icon. The Response main screen appears.
2. Click **New**. The New Database dialog box opens.
3. Type a name for the database file in the **Name:** text box.
4. Click **OK**.
